

Harness the Power of Your Data Unified, Self-Service Reporting + Analytics

Any Application • Any Data Source • Any Device

Fast, Flexible Reporting & Analytics

With a single point of entry to access your data, Orbit empowers you to easily build, analyze, share, and publish reports and dashboards – leveraging data from all key data sources. Gain operational insights on-demand, and spend more time keeping your pulse on the business, and less time requesting and developing reports.

Access your data — in real time —
from all key data sources

Drill down into your data with
interactive charts and visualizations

Easily build, share, and publish
reports and dashboards

Maintain essential data security and
governance

Connect All of Your Data in Real-Time

Orbit Reporting and Analytics comes with more than 200 integrators and database connectors that allow you to combine data from all key cloud and on-premise business systems, providing instant access to data from across your company. This enables you to quickly spot trends, identify opportunities, and make data-guided decisions with confidence. **Some of Orbit's pre-built integrations include:**

Why Orbit?

We believe that business users – from the analysts to departmental managers to the CEO – should have access to real-time data that gives them a 360° view of their operations and puts the full power of operational and ad hoc reporting in their hands.

Who Does Orbit Help?

Business Operations

View and analyze your data in real-time so that you can base your decisions on facts – not on hunches.

Finance Teams

Get on-demand access to all of your financial data for fast, accurate, and reliable reporting.

HR Teams

Access all of your employee data, all in one place, so you can predict your staffing needs and improve your business performance.

Supply Chain Teams

Make real-time forecasts that help you reduce your costs, meet customer demand, and drive growth.

IT Teams

Empower end users with self-service reporting while you maintain tight control over your data.

Drive More Value from Your Data

Orbit offers a range of capabilities that help you create reports, dashboards, and visualizations, analyze and interpret data, and extract meaningful insights – so that you can take data-driven action.

Charts

Orbit makes it easy for you to create interactive charts – from simple tables to complex visualizations. You can click any chart to drill down for more in-depth information.

Data Mashing

Get the whole picture. Orbit's data mashing abilities allow you to pull and view data from multiple, disparate data sources in varying locations and formats – without replication – to create a single and comprehensive “virtual” data layer.

Mobile Reporting

Access your reports from any mobile device. Orbit's app is certified by both iOS and Android. This gives you the security, speed, and flexibility you need to get things done – whether you're in the office or on the road.

Reporting Dashboards

Orbit brings all of your company's data together in clear, interactive dashboards. With Orbit dashboards, you can get a quick snapshot of your operations or drill down for granular detail. It takes less than 5 minutes to build high quality, interactive dashboards in Orbit.

Pixel Perfect Reporting

Take raw data from one or more applications and convert it into professional business documents that you can share with others – such as purchase orders, invoices, and other correspondence.

Data Security and Governance

Achieve complete compliance with your role-based data governance and security policies.

Orbit Excel Edge

Excel Edge is an extension of Orbit. It enables users to run Orbit reports directly in Excel. The extension requires users to authenticate themselves before they can view any data, ensuring complete compliance with your company's security policies.

Financial Statements

Orbit includes a user-friendly financial statement generator. It syncs with general ledger and sub-ledger applications, so you can produce interactive financial statements such as balance sheets, income statements, and other corporate financial statements.
